Letter
Circular
LC-585

CLASSIFICATION OF ACOUSTIC MATERIALS

The following compilation of acoustic materials has been prepared to assist in the determination of the acceptability of materials which may be proposed to be furnished under Federal Specifications SS-A-118 and SS-P-391. These may be obtained from the Government Printing Office, Washington, D. C., for 5 cents each. The inclusion of a material in this list should not be construed as a general approval of this material. The compilation is based upon the sound absorption coefficients given in Letter Circular LC-573, dated November 15, 1939. It includes some materials which are not covered by the Federal Specifications, and others which do not meet all of their requirements.

Mounting:

1. Cemented to gypsum wall board. This is considered equivalent to cementing to plaster or masonry.
2. Nailed on 13/16" x 2" furring 12" o.c. unless otherwise indicated.
3. Metal supports attached to 13/16" x 2" wood furring.
4. Laid directly on laboratory floor. As a rule the results obtained this way are the same as when the tile is cemented to gypsum wall board.
5. Nailed on 2 x 4's 12" o.c. unless otherwise indicated.
6. Cemented to the floor of the reverberation chamber.
7. Back of sample covered with concrete.
8. Attached to metal suspension system. 4" air space back of tile.
9. Acoustic tile nailed to 13/16" x 2" furring 18" o.c. Space between furring filled with Rockwool.
10. Laid on 2 x 8's, 12" o.c.
11. Laid on 24 gauge sheet iron, nailed to 13/16" x 2" furring 24" o.c.
12. Clipped at corners to 5/8" x 1 3/8" metal furring 12" o.c. Furring was clipped to 1 1/2" channels which were 3'6" o.c.

Fire Resistance:

- c. Combustible, as defined in Federal Specification SS-A-118.
- s. Slow burning, as defined in Federal Specification SS-A-118.
- r. Fire retardant, as defined in Federal Specification SS-A-118.
- i. Incombustible, as defined in Federal Specification SS-A-118.

Absorbex	1, 2, 4, 6, 7, 8, 9, 11, 12, 13
